# Casualty Return 1986

**LLOYD'S REGISTER OF SHIPPING**

71 Fenchurch Street London EC3M 4BS Telephone 01-709 9166 Telex 888379

# DEFINITIONS

**1 Total Loss** For the purpose of Lloyd's Register Casualty Return the term 'Total Loss' refers to a merchant ship which, as a result of being a marine casualty, has ceased to exist, either by virtue of the fact that the ship is irrecoverable or has subsequently been broken up. Ships which have been declared constructive total losses but which are undergoing or have undergone repairs are not included. Ships of less than 100 gross tonnage are not included in the Return.

**2 Casualty Categories** are defined as follows:

**Foundered** Includes ships which sank as a result of heavy weather, springing of leaks, breaking in two, etc., but not as a consequence of categories listed below.

**Missing** After a reasonable period of time, no news having been received of a ship and its fate being therefore undetermined, the ship is posted as 'Missing' at the Corporation of Lloyd's and is included in the Missing category on the data base together with similar cases reported by other reliable sources.

Note: In peacetime, missing ships are considered as losses occasioned to ships by marine perils.

**Fire/Explosion** Includes ships lost as a result of fire and/or explosion where it is the first event reported.

Note: It therefore follows that casualties involving fires and/or explosions after collisions, stranding, etc., would be categorised under 'Collision', 'Stranding'.

**Collision** Includes ships lost as a result of striking or being struck by another ship, regardless of whether under way, anchored or moored. This category does not include striking underwater wrecks.

**Contact** Includes ships lost as a result of striking an external substance but *not* another ship or the sea bottom (see categories 'Collision' and 'Wrecked/Stranded'). This category includes striking drilling rigs/platforms, regardless of whether in fixed position or in tow.

**Wrecked/Stranded** Includes ships lost as a result of touching the sea bottom, sandbanks or seashore, etc., as well as entanglement on underwater wrecks.

**Lost, etc.**

(i) **War Loss/Damage during Hostilities.** This category also encompasses loss occasioned to ships by hostile acts.

(ii) **Hull/Machinery Damage** Includes ships lost as a result of hull/machinery damage or failure which is not attributable to any other category.

(iii) **Miscellaneous** Includes ships which have been lost which, for want of sufficient reasons, cannot be classified.

**3 Date of Casualty** The date of casualty is that on which the first reported event of the casualty occurred.

## Summary of Total losses during 1986

The total tonnage lost during 1986 (2,608,735 gross tonnage) showed an increase of 957,525 gross tonnage over the figure for 1985, while the number of total losses (265) is the lowest since 1964. Nearly fifty-seven per cent of the tonnage lost is attributable to the Iran-Iraq conflict. Comparisons over a period of thirteen years are shown at the end of Table 1.

The largest ship totally lost during the year was the Liberian steam tanker HAWAII (176,052 gross tonnage, built 1974).

**Foundered** The number of ships that foundered during 1986 (99) was nine less than the previous year and the lowest figure since 1968. Over thirty-eight per cent of these were twenty years old or more. The tonnage lost in this category showed a decrease of 59,249 to a figure of 182,985 gross tonnage.

The oldest ship totally lost during 1986, was in this category. It was the Italian steam tug GIUSEPPE IRRERA (119 gross tonnage, built 1909) which sank at Cagliari whilst laid up.

Notable losses in this category included the Icelandic general cargo ship SUDURLAND (2,333 gross tonnage, built 1972) which listed and sank in heavy seas. Eight of her eleven man crew managed to get onto liferafts, but only five survived the severe weather conditions. In February the French stern trawler SNEKKAR ARCTIC (641 gross tonnage, built 1985) sank whilst fishing during a gale and snowstorm. Seventeen lives were lost after she sustained electrical failure prior to sinking.

**Missing** Seven ships were reported as missing during the year compared with two in 1985, while tonnage in this category showed a decrease of 18,229 gross tonnage to a figure of 10,341 gross tonnage.

The two most notable losses were both general cargo ships. The People's Republic of China registered DE BAO (3,995 gross tonnage, built 1986) on voyage from Constantza to Huangpu with a cargo of 3,324 tonnes of steel bars, last reported in the Indian Ocean on 15th June and the Singapore registered MAGNOLIA (3,380 gross tonnage, built 1974) last reported south of Taiwan on the 26th November, in which twenty-two people lost their lives.

**Fire/Explosion** Gross tonnage totally lost in this category during 1986 was 304,061 an increase of 27,935 gross tonnage over 1985. The numbers of losses in this category fell to forty-seven, one fewer than recorded for 1985.

Only three incidents are recorded against tankers. Significant was the loss of the Bahamas flag SOUTHERN CROSS (18,493 gross tonnage, built 1977). Three lives were lost following an explosion which ignited the vessel's tanks whilst loading gas oil at Skikda.

In April the Greek refrigerated cargo carrier ALASKA II (928 gross tonnage, built 1959) sank within ten minutes after an unexplained explosion: two people were reported missing. The ship was on a ballast voyage from Jeddah to Suez. In 1984 several ships reported explosions caused by mines in the Red Sea and the Gulf of Suez.

Another notable loss in this category was the British dredger ARCO TEES (2,206 gross tonnage, built 1973) which suffered an explosion while 10 miles off Great Yarmouth, believed caused by a bomb or mine dredged through the suction pipe. The ship was subsequently taken to Bruges for breaking.

Two hydrofoil ferries sustained engine room fires which resulted in seventeen deaths.

The largest ship lost in this category was the Greek ore/oil carrier GALINI (71,318 gross tonnage, built 1973) while on a ballast voyage to Lisbon. Five of the thirty-five crew were killed when the ship was extensively damaged by explosion and fire 142 miles north of Cape Ortegal. She was subsequently towed to Bangkok for breaking.

**Collision** Total losses through collision decreased to 21 ships of 32,158 gross tonnage, the lowest tonnage and number of ships lost since 1962. Tonnage in this category was mostly accounted for by the loss of the U.S.S.R. passenger/general cargo ship ADMIRAL NAKHIMOV (17,053 gross tonnage, built 1925) (See Lives Lost category.) Of the twenty-one incidents recorded, at least eight occurred in bad visibility or fog.

**Contact** Five ships were lost in this category during the year, amounting to 31,605 gross tonnage, most of this accounted for by the Panamanian bulk carrier RIVIERA SKY (30,370 gross tonnage, built 1967) which struck a submerged object in the South China Sea during heavy weather.

Stormy weather off the coast of Leixoes in February resulted in a number of incidents leading to the closure of the port. Seven of the eight crew on the Portuguese tug CHARNECA (320 gross tonnage, built 1982) were reported missing when the ship sank after striking the port breakwater. The tug had experienced engine failure whilst entering port.

**Wrecked/Stranded** Total losses in this category showed a decrease in the number of incidents to fifty-one ships. While this is twenty-three ships less than 1985, the tonnage has more than doubled to a figure of 528,256 gross tonnage.

The largest ship was the South Korean ore/oil carrier DAEYANG FAMILY (96,760 gross tonnage, built 1972) which stranded off Cape Town after dragging anchor in heavy weather. In November the Hong Kong registered ore/bulk/oil carrier KOWLOON BRIDGE (89,438 gross tonnage, built 1973) lost steering in heavy weather and stranded on The Stags rock. The 169,080 deadweight ship was on voyage from Seven Islands to Hunterston with a full load of iron ore. She had previously encountered heavy weather damage whilst crossing the Atlantic and put into Bantry Bay for inspection. In worsening weather she lost an anchor and it was decided to continue the voyage; a short while later she lost the tip of her rudder and was abandoned.

Two notable losses in this category were the U.S.S.R. passenger/general cargo ship MIKHAIL LERMONTOV (20,352 gross tonnage, built 1972) which struck rocks off Cape Jackson, New Zealand, in heavy weather, where one crew member died; all passengers were rescued safely and the St. Vincent registered passenger/troopship TRITON (16,907 gross tonnage, built 1952 better known as the UGANDA, which until her lay up in the River Fal in 1985 had served as a troop ferry in the Falkland Islands. The ship had been due for demolition at Kaohsiung but news of a possible reprieve caused her to be anchored outside the demolisher site. The ship had been renamed and reflagged for her final voyage when typhoon Wayne ended her long and illustrious career.

**Lost, etc.** As already indicated, the largest percentage of tonnage lost during the year fell into this category. Nearly 57 per cent of all tonnage lost during 1986 was directly attributable to the Iran-Iraq conflict. This year saw a major escalation in attacks on merchant shipping and in particular tankers. This in the main accounts for the high tonnage loss and at the time of going to press decisions were still awaited on a number of ships, which will affect the overall picture. Fifteen tankers, one ore/oil carrier, one LPG carrier and two tugs were amongst those claimed by the conflict.

Nine ships over 100,000 gross tonnage are included in this category, all of which were lost as a result of hostilities in the Gulf region. The largest ship was the Liberian steam tanker HAWAII (176,052 gross tonnage, built 1974) which was extensively damaged by fire after being struck by a missile 60 miles south of Kharg Island whilst laden with 329,000 tonnes of crude oil.

Other notable losses in this section included two general cargo ships damaged by mines at Namibe and two hydrofoil ferries which sank at Messina after an explosion believed to have been caused by a magnetic device. A Panamanian general cargo ship was broken up as a result of damage during hostilities at Aden.

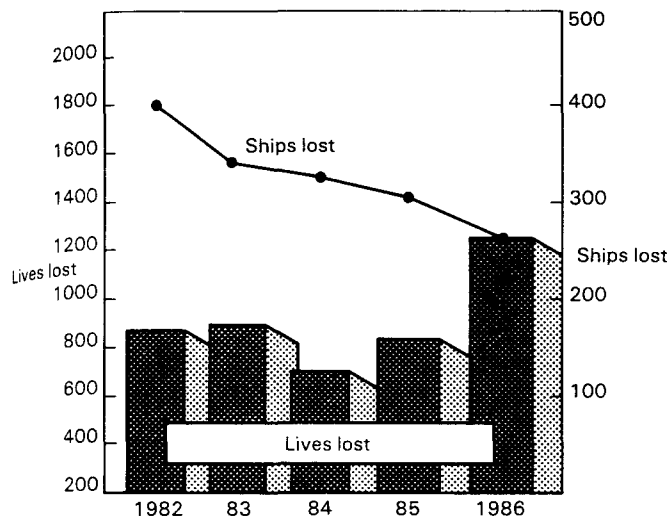

**Distribution** The geographical distribution of total losses during the year is shown on pages 10 and 11.

**Types** The total number of 265 ships lost during 1986 included 23 oil tankers, gross tonnage 1,384,613 (53.1 per cent), 20 ore/bulk carriers, gross tonnage 757,354 (29.0 per cent) and 44 fishing craft. One hundred and twenty-eight general cargo vessels were lost, accounting for 341,164 gross tonnage (13.1 per cent). (For an analysis of losses by type see Table 3).

**Size** Forty-two per cent of ships lost were under 500 gross tonnage. Forty ships with a gross tonnage of 10,000 and above were lost, of which nine were over 100,000 gross tonnage.

**Age** Twelve per cent of all ships lost were less than ten years old; over nineteen per cent were twenty-five or more years of age. The youngest vessel lost was the general cargo ship DE BAO (People's Republic of China flag) which was reported missing whilst on her maiden voyage from Romania.

**Lives Lost** The number of persons reported killed or missing as a result of total losses are indicated below for the years 1982-1986. The figure for 1986 (1,067) represents the highest total since 1981 (1,215).

The greatest loss of life occurred when the passenger/general cargo ship ADMIRAL NAKHIMOV (U.S.S.R. flag, 17,053 gross tonnage, built 1925) sank after collision with the bulk carrier

PYOTR VASEV 8 miles off Novorossiysk, with the loss of four hundred and twenty-three lives. Originally built as the BERLIN, the sixty-one year old ship had previously been rebuilt after striking a mine in the Baltic Sea in 1945.

One hundred and ninety-nine lives were lost on the Philippine roro cargo/ferry DONA JOSEFINA (996 gross tonnage, built 1968) which listed and sank off Isabel, Leyte Island, Philippines. This is the fifth consecutive year in which a Philippine ferry has featured in this section of the notes.

Seven ships sustained twenty or more human casualties during 1986. Of the 265 total losses, seventy-two incidents recorded some loss of life. Whilst thirty-three ships in the foundered category accounted for four hundred and nineteen lives, in the collision category the loss of the ADMIRAL NAKHIMOV alone accounted for four hundred and twenty-three.

Although the Gulf war has been responsible for high tonnage losses in recent years, the number of fatalities has been minimal in comparison with other categories.

**Registration** Panama, Japan and Cyprus suffered the highest number of ships lost, with 38, 27 and 21 respectively. Liberia suffered the highest gross tonnage loss with 849,663 followed by Cyprus with 361,760. Other registrations sustaining losses over 150,000 gross tonnage included Greece (217,055) and Panama (178,309).

Total losses for countries whose merchant fleets totalled more than six million gross tonnage are shown below with comparative figures for 1985 shown in parentheses. Further comparisons can be obtained from Table 5.

Other flags sustaining losses over 100,000 gross tonnage were Malta (125,516), Iran (121,970) and Spain (113,845).

## Summary of ships Broken up, etc., reported during 1986

Tonnage broken up reported during 1986 decreased by 1,941,593 to a figure of 20,287,742 gross tonnage and is the second highest total ever recorded. The number of vessels involved (1,888) is 472 fewer than that recorded for 1985. Comparisons over a period of thirteen years are shown at the end of Table 1.

The two largest ships broken up during the year were the French flag steam tankers BATILLUS and BELLAMYA (275,268 gross tonnage, built 1976) which accounted for nearly 60 per cent of the French flag tonnage demolished in 1986. Both ULCC's had previously been laid up at Vestnes prior to delivery to breakers.

The oldest ship reported broken up during the year was the Danish auxiliary general cargo schooner CLEMENS (167 gross tonnage, built 1898). The oldest ship included in the Return was the United States registered suction dredger NIAGARA (1,804 gross tonnage, built 1897) which is now a museum exhibit at Erie, Pa.

Countries sending most tonnage to the breakers during the year were as follows:

	Gross tonnage
Liberia	3,479,357
Panama	2,969,784
Greece	2,445,281
Japan	1,980,056
Cyprus	1,026,781
France	920,098
Malta	821,720
Cayman Islands	621,689
United States of America	570,519
Netherlands	455,458
Italy	407,829
Korea (South)	393,617
U.S.S.R.	374,903
Philippines	319,463
Gibraltar	300,725

The Province of Taiwan maintained its position as the principal place of disposal taking over thirty-eight per cent of all tonnage. Although their share of the world market increased by over three per cent and the number of ships was 116 more than in 1985, the actual tonnage decreased by 48,289 to a figure of 7,773,450 gross tonnage. This decrease may be explained by the suspension of breaking operations following the explosion in the bunker tanks of the 300,070 deadweight ULCC CANARIA which was being made ready for scrapping at Kaohsiung.

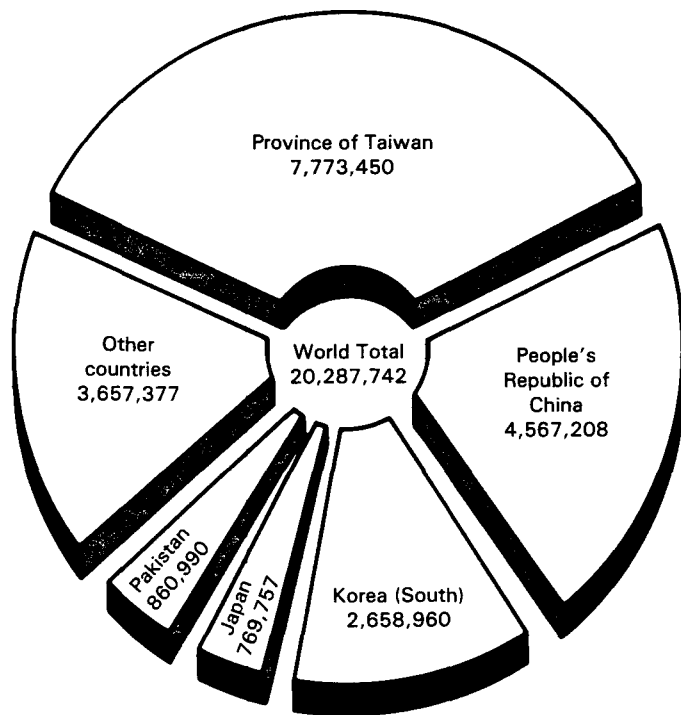

The People's Republic of China took nearly half a million gross tonnage less than recorded for 1985, but still remains second with 22.5 per cent, taking forty ships less than in the previous year. Korea (South) increased its percentage slightly to 13.1 taking 16

ships and 107,711 gross tonnage more than in 1985. Pakistan's share fell to 4.2 per cent, below one million gross tonnage for the first time since 1981, whilst India took less than half the tonnage taken in 1985.

Thailand and Indonesia have increased their efforts to reduce the size of their ageing domestic fleets. Spain remains the dominant European shipbreaking nation taking 580,787 gross tonnage. Turkey demolished twenty-seven ships with a slight increase in tonnage percentage.

Japan demolished the highest number of ships with 449, mostly small domestic tonnage. Only four countries demolished more than 100 ships.

**Principal places of Disposal**  
(showing gross tonnage broken-up)

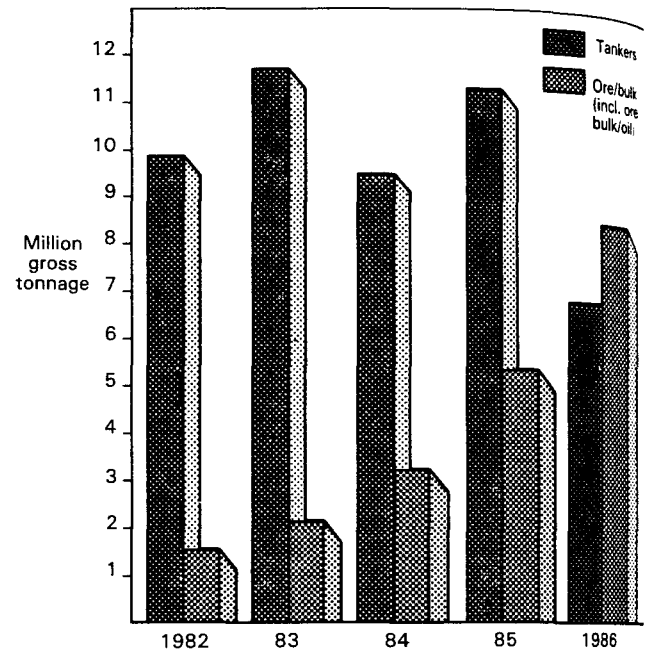

Tanker tonnage disposed of (6,844,020 gross tonnage) amounted to 33.7 per cent of the total sold for demolition, compared with 50.8 per cent in 1985. The average size of tanker broken up was 32,283 gross tonnage. Thirty ships of 100,000 gross tonnage and above were broken up during the year: all but one were steam tankers, the exception being the Liberian steam ore/oil carrier DONAU ORE (113,173 gross tonnage, built 1971).

Following the upturn in the tanker market and the demand for replacement tonnage for tankers lost or damaged in the Gulf

region, for the first time in many years the amount of dry cargo tonnage sold to breakers has been greater than tanker tonnage. The overcapacity in the bulk cargo sector has meant increased sale activity to breakers, with three hundred and eighty-five ore/bulk carriers demolished. Ore/bulk carriers disposed of (8,539,724 gross tonnage) amounted to 42.1 per cent of the total. Comparisons between tankers and bulk carriers broken up over a period of five years can be seen below.

**Tankers and Bulk Carriers Broken up, etc., 1982-86**

Eight-hundred and five general cargo ships were broken up, a decrease of 236 compared with 1985. Sixty-seven per cent of these were twenty years old or more.

**Serious casualties**

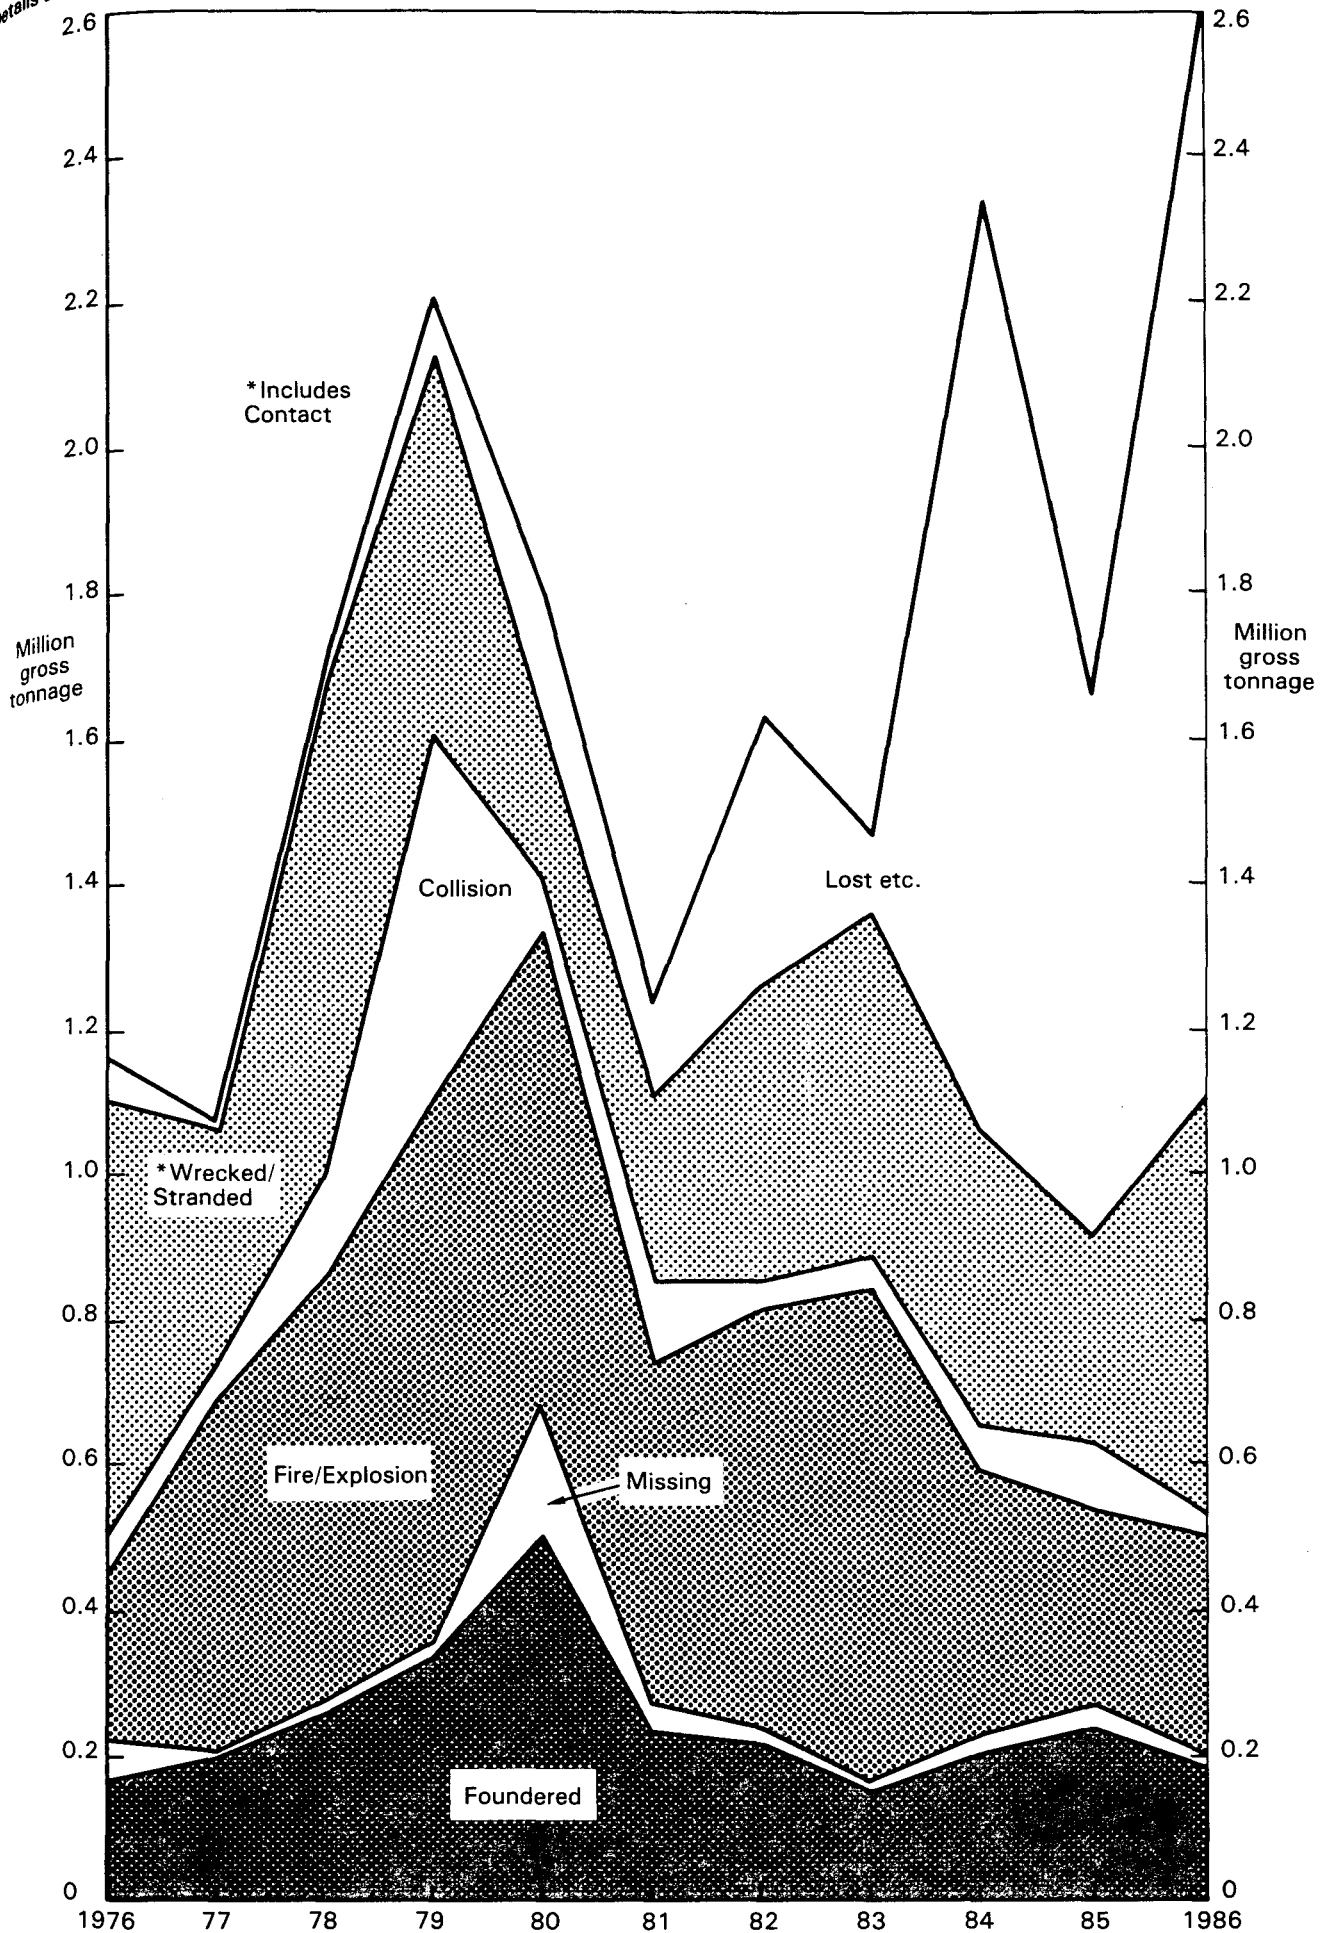

Owing to the prevailing market conditions and also the Iran-Iraq conflict, there is a growing number of ships seriously damaged, or, as in the case of the war, trapped and/or damaged, for which a decision regarding repair or disposal has been considerably delayed. A separate section dealing with these cases is included in this Return (see Part 3). They will, of course, appear in the relevant Casualty Return at the time of their eventual disposal.

**Ships reported sold for Breaking up**

There are an increasing number of ships which have been reported sold for breaking up, but where demolition did not commence during the period covered by this return. As an extra service we are providing an alphabetical list of these ships, together with their gross tonnage, in a separate section at the end of this return (see Part 4). They will, of course, appear in the relevant Casualty Return at the time of their eventual disposal.

## Lloyd's Maritime Information Services Limited

Lloyd's Maritime Information Services Ltd. (LMIS) is a joint venture company owned by Lloyd's Register of Shipping and Lloyd's of London Press Limited and was founded in 1986 to enable the maritime community to have access to what is probably the largest source of commercially available shipping information worldwide.

Information is recorded on large computer databases relating to the birth, life and death of propelled sea-going merchant ships of 100 gross tonnage and above, ownership (including parent companies) and movements of some 35,000 ships engaged on international trade. Data may be extracted from one or more of the following files:

- Ships on order
- Ship characteristics
- Ship owners, parent companies and addresses
- Ships under construction
- Ship movements
- Ship casualties
- Ship demolitions

LMIS services and products are used extensively within the world's maritime community with particular reference to:

- Aiding sales and marketing
- Assisting research and development
- Helping day to day operations
- Providing facts to help plan for the future
- Supporting and assisting in decision making

Shipping Information Services division is responsible for marketing data. Output may be in the form of a computer listing or statistical analysis but may also be written to magnetic tape or diskette for use on clients' own computer installations. Individual extract programs are written to meet individual client specifications. For instant access to information, on-line services are also available.

Shipping Economics Advisory Group (Sea Group) offers high level business consultancy services particularly in the strategic, economic and commercial aspects of shipping and its related industries.

Other services include commodity analysis, forecasting, systems development, vessel operations, market research, commercial operations and strategic and business planning.

Multi-subscriber services are also provided which include monthly tanker reports, tanker and dry bulk market forecasts, oil movements analysis and high level subscriber reports on topical issues.

Lloyd's Maritime Data Network Inc. (Lloyd's Mardata) are exclusive LMIS representatives in North America and are ready to help with any enquiry. Lloyd's Mardata also offer a full range of on-line services utilising subsets of the main LMIS databases. In addition, a unique Charter Fixture Library is available. The benefits of on-line retrieval are coupled with a very powerful statistical and analytical capability for Lloyd's Mardata clients.
